

Radiation Measurement Results of 401 Items in February 2012

※The analytical software we used for radioactivity measurement between November 2011 and March 2013 was older than the one we use currently, therefore, the both values for measured results and minimum limit of detection during this period may differ comparing the present measured values. Please refer those values as an indication for radiation dose at the time of the Daiichi Fukushima nuclear accident.

When samples include natural radionuclides we can't deny the possibility of their radiation value counted together in our results.

The list below only shows the measurement results of the samples brought in.

Radioactive contamination level may differ according to sampling points even within the same address.

★Gamma-ray

(Bq/Kg raw:Weight of raw sample Bq/Kg dry:Weight of dried sample)

Samples	Sampling Point	Sampling Month	Measurement Result		Uncertainty	Total Amount of Cesium	Minimum Limit of Detection		
Brown rice	Kakuda, Miyagi	Oct-11	Cs137	2.7 Bq/Kg生	± 2.1 Bq/Kg生	6.2	Cs137	6.0 Bq/Kg生	
			Cs134	3.5 Bq/Kg生	± 1.7 Bq/Kg生		Cs134	4.0 Bq/Kg生
