

## The Results of Food Radiation Measurement in October 36items

※In the following, we publish all the results that include those under the minimum limit of detection, although these small values are otherwise dealt as <Not Detected>.

When food samples include natural radionuclides other than cesium we can't deny the possibility their radiation value counted together in our results.

**The list below only shows the measurement results of the samples brought in.**

**Radioactive contamination level may differ according to sampling points even within the same address.**
